

BestCrypt Data Shelter™

Data Access Control
For Windows

PROTECT DATA ACCESS

Data is most **vulnerable when it's accessed**.

Encryption protects data at rest, while most security tools focus on the perimeter. But within trusted environments, applications and AI agents can still access files too broadly.

That's when **data can be stolen or leaked**.

A Firewall for Your Sensitive Data

Built on **zero trust, default deny principles**, BestCrypt Data Shelter allows access only to approved users, applications and processes.

By controlling access to sensitive data, it helps:

- Prevent data leakage and theft
- Restrict over-permitted applications
- Control access to critical folders
- Support immutable backups
- Reduce ransomware risk

MAIN FEATURES

Application Access Control

Allow only trusted applications and users to access protected data.

Additional Protection Layer

Enforce access control even after files are opened.

Layered Security Architecture

Fill the gap between encryption, authentication and perimeter security.

Granular Policy Enforcement

Create and enforce detailed access control policies.

Central Management **NEW**

Centrally define and enforce protection policies across endpoints.

BENEFITS & ADVANTAGES

Prevent Data
Leakage

Limit Insider &
Process Risk

Maintain Control
Over Data

Reduce
Ransomware Risk

Ongoing
Data Protection

TECHNICAL SPECIFICATIONS

Protection Capabilities

- Protect sensitive folders and files from unauthorized access
- Restrict AI assistants, automated tools and unauthorized processes
- Restrict file copy and extraction from protected locations
- Enforce application-based access control policies
- Prevent unauthorized encryption or modification of files

Control & Monitoring

- Build protection policies from observed activity and file types
- Password-protect policies from unauthorized modification
- Monitor access and process behavior with detailed logs
- Store and review data access history for visibility

Integration & Compatibility

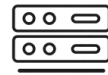

- Works alongside endpoint protection and security tools
- Extends encryption protection by controlling access to protected data during active use
- Supports encrypted and immutable backups

DEPLOYMENT OPTIONS

Standalone Endpoints

Install, activate and manage BestCrypt Data Shelter on standalone endpoints. Best for smaller teams.

Central Management

Deploy and manage BestCrypt Data Shelter policies from a central console. Integrate with data discovery and secure erasure for complete endpoint data protection. Best for large and medium teams.

COMPLETE ENDPOINT DATA PROTECTION

Protect data at every stage of its lifecycle:

- **Discover** where sensitive data is stored with **BCWipe Search**
- **Protect** data with encryption and access control using **BestCrypt**
- **Erase** data securely when no longer needed with **BCWipe**

Jetico solutions work together to provide full visibility, control and secure data handling across endpoints.
